Brand/trade name: METROCALL

Price: SEE ATTACHED PRICE LIST

Terms: NET 30

Effective dates: 02/20/02 through 02/19/03 four one (1) year renewal options.

Days required for delivery: 2 DAYS

Price guarantee period: 1 YEAR

Minimum order: ONE

Min shipment without charges:

Other conditions:

NOTE: CONTRACT INFORMATION SHEET HAS BEEN UPDATED.

REMIT TO:

VENDOR #: 48632D METROCALL PAYMENT PROCESSING CTR
P.O. Box 78215
Phoenix, AZ 85062-8215

This contract covers only those items listed in the price schedule. It is the responsibility of the agency to ensure that other items purchased are invoiced separately. State agencies will place orders directly with the vendor (creating a PG in Finet) and make payments for the same on a PV referencing the original PG. Agencies will return to the vendor any invoice which reflects incorrect pricing.

AUTHORIZATION REQUIRED FOR ALL STATE AGENCIES: PURCHASE REQUIREMENTS BY STATE AGENCIES FOR APPLICATIONS USING A NON-ENCRYPTED DEVICE THAT WILL HAVE NETWORK INTERFACE, CONNECTIVITY, OR ACCESS TO THE INTERNET, MUST FIRST BE AUTHORIZED BY THE DIVISION OF INFORMATION TECHNOLOGY SERVICES (ITS), RICK GEE, (801) 538-9567, rgee@das.state.ut.us.

FINET COMMODITY CODE(S):

72545540000 - PAGERS, RADIO, PARTS AND ACCESSORIES

91505000000 - ANSWERING/PAGING SERVICES

REPORTS

THE CONTRACTOR WILL SUBMIT YEARLY REPORTS TO THE STATE PURCHASING AGENT
SHOWING QUANTITIES AND DOLLAR VOLUME OF PURCHASES BY EACH STATE AGENCY AND POLITICAL SUBDIVISION.
THESE REPORTS WILL BE DUE 10 DAYS AFTER THE CALENDAR QUARTER.

DISPATCHING METHODS

Dispatch Method	Advantages	Disadvantages
1. Telephone Message Dispatch	Ubiquitous access from any phone.	Numeric message only.
2. Live Operator Dispatch: Operator takes message over the phone and sends alpha-numeric message to pager.	Ubiquitous access from any phone, complete text messages.	Possible mis-communication with operator. Takes longer.
3. Alphamate Sending Device: Desktop keyboard	Fast modem access, full text messages.	Not portable.
4. Email Message Dispatch: Send a message to any Metrocall pager through email by addressing the 10 digit pager number as an email address as follows: xxxxxxxxx@page.metrocall.com	Messages can be sent from any email system with no special hardware or software. Full text messages. Simple to send messages to multiple users.	Email adds system complexity. Email delays.
5. Metrocall Website Messaging: Send message to any Metrocall pager through the "Send Message" feature on the Metrocall web site.	Messages can be sent by anyone who has Internet access.	Internet adds system complexity. Sometimes Internet has delays. No multiple address messages.
6. 2Way Pager: Dispatch messages to any other pager.	Completely portable. Fastest and most dependable system during emergencies.	None.
7. SwiftSend: Metrocall paging software that is loaded on PC with modem.	Full featured. Easy to install and use PC software. Easy to establish directory and groups. Keeps log of messages.	For PC use only, cannot be used on network.
DISPATCHING METHODS (CONTINUED)		
8. WirelessOffice: Metrocall paging software that is loaded on network server.	Full featured. Easy to use. Easy to establish directory and groups. Keeps log of messages. Centralized administration of data.	None.
9. IRM: Integrated software and hardware package that allows large network systems to manage all their wireless devices through one database.	See complete product description in Attachment L3. Includes Direct Connect.	Requires time to design and install.
10. ELink Agent Enterprise: Allows you to wirelessly retrieve and respond to the email sent to your PC. It is totally transparent to those corresponding with you.	Convenience of using one email address.	Equipment limited to RIM devices.
11. Blackberry: Allows you to wirelessly retrieve and respond to the email sent to your PC. It is totally transparent to those corresponding with you.	Convenience of using one email address. Messages are encrypted.	Equipment limited to RIM devices.
12. Motorola V-Client: Provides end-to-end encryption of messages from server to 2way pager.	End-to-end encryption of messages.	Equipment limited to Motorola P935 TimePort.
13. Direct Connect: Allows direct connection of Customer's network to Metrocall paging terminal through a dedicated phone line and a redundant dial-up line.	Faster. More accurate message transfer.	None

PC DISPATCHING SOFTWARE DESCRIPTION AND PRICING

SwiftSend software allows you to send text messages directly from your PC to alpha-numeric one-way and 2-way pagers. It is simple to use, and easy to set up.

SwiftSend is designed to run on a PC with a modem in a Microsoft Windows environment. It supports Windows 95, Windows 98, or Windows 2000 Professional or Server.

Features:

- Unlimited number of user pagers.
- Unlimited number of groups.
- Unlimited number of different paging carriers.
- Predefined "Canned" messages.
- Pre-scheduled messaging.
- Automatic modem detection.
- Imports previous Metrocall NoteSender and AT&T MessageFlash databases.

Pricing:

PC MODEM DISPATCH SOFTWARE:

Type	State Rate
SwiftSend (Windows Version)	17.95

NETWORK DISPATCH SOFTWARE DESCRIPTION AND PRICING

Wireless Office (WO):

WO is an enterprise software application, which allows text messaging to individuals as well as groups across a computer LAN or WAN. This powerful and robust solution allows for a single database with centralized administration that can be accessed by as many PC workstations as desired through the appropriate license. Wireless Office is a flexible product line with modular components.

WIRELESS OFFICE DISPATCH

Basic network-able package. Comes with an administration application to be used centrally to manage the system and database, as well as a client application that can be installed on as many workstations as you need.

WIRELESS OFFICE DISPATCH – NETWORK DISPATCHING SOFTWARE:

Type	State Rate
5 concurrent users	\$250.00
10 concurrent users	\$500.00
25 concurrent users	\$1,000.00
50 concurrent users	\$2,000.00
100 concurrent users	\$4000.00
Service Plan on above software, annual agreement	25% of purchase price per year
Service Call without Service Plan, per incident (open ticket)	\$125.00

WIRELESS OFFICE SUITE

This expandable package adds the ability to automate paging. It includes "File Messenger" and "Command Line" utilities. These powerful tools allow for automated, rules based text messaging from any computer file that you set the system up to look for and read.

In addition, the WO Suite has three powerful modules available:

- **Web Messenger**- Allows for the browser already on every PC workstation to access the central database and paging application without the need to install the client application on every PC. Also, Web Messenger comes with a web developer's kit allowing integration into your enterprise home page.
- **Email messenger**- Allows an email application to be utilized as the client application to see and utilize the central paging database.
- **Alarm Messenger** – This powerful module allows for ASCII input from any systems monitor equipment and turns it into an automated wireless message. Examples would be fire and entry alarms, contact closures, or HVAC systems.

WIRELESS OFFICE SUITE – NETWORK DISPATCHING SOFTWARE:

Type	State Rate
WirelessOffice – 5 user license	\$500.00
WirelessOffice – 10 user license	\$800.00
WirelessOffice – 25 user license	\$1,500.00
WirelessOffice – 50 user license	\$2,500.00

WirelessOffice – 100 user license	\$4,500.00
WirelessOffice – 250 user license	\$6,500.00
WirelessOffice – 500 user license	\$9,000.00
WirelessOffice – 750 user license	\$12,000.00
WirelessOffice – Site license	\$15,000.00
Web Messenger Module	\$1000.00
Email Messenger Module	\$1000.00
Alarm Messenger Module	\$1000.00
Service Plan on above software, annual agreement	25% of purchase price per year
Service Call without Service Plan, per incident (open ticket)	\$125.00

INTEGRATED RESOURCE MANAGEMENT (IRM) DESCRIPTION

The IRM is an integrated solution of proprietary hardware and software allowing for the management of all aspects of your enterprises wireless communications. The IRM System is an on-premise, real-time directory and wireless messaging system that allows for improved communications throughout your enterprise. Fully scalable from one to 5,000 or more users, the IRM integrates seamlessly into your existing communication infrastructure: LAN/WAN, Intranet, Internet and PBX systems.

Extensive benefits are realized through the deployment of a Metrocall IRM system:

- Word (alphanumeric) messaging now available from anywhere in the customer's enterprise (via the LAN).
- Extremely fast and reliable text messaging through dedicated connectivity to Metrocall's paging terminal; no need for modem dial-up.
- Modular, relational database which allows the entire enterprise access to the same database of information.
- A single method of paging for all pagers (in-house or wide area), which simplifies communication between personnel.
- Ties all the different communication methods a corporation currently uses into one integrated system and process.
- Integrates your Human Resource employee directories and pager databases into one system.
- Perform on-premise pager change-outs and activate new pagers from an administrator workstation without any delay.
- Ability to generate on demand reporting by cost center, department, facility, etc., sorted by pager number, pager type, etc.
- Summary reports and invoices can be prepared from the IRM System allowing the customer to set up a profit center or internal departmental billing at customer-determined rates.

Please see your Metrocall representative to arrange a consultation with our dedicated Systems Applications Team for pricing and additional information.

ELINK AGENT ENTERPRISE DESCRIPTION AND PRICING

ELink Agent merges your Internet mailbox with a portable handheld device. It automatically retrieves mail from your POP/IMAP Internet mail account and gives you the convenience of one email address with the flexibility of deciding which desktop messages follow you.

ELink Agent Solution includes:

- ◆ The same email address as your POP/IMAP mailbox
- ◆ Filter and forward capabilities accessible via a web browser so you decide which mail is sent to your wireless device
- ◆ Respond capability that makes replies look like they're coming right from your desktop
- ◆ Access to your Internet mailbox automatically (by setting the time interval) or manually (by clicking the "Check Mail" icon)
- ◆ Many of the same menus found in your Internet mailbox – reply, forward, save, delete
- ◆ Messages sent from the wireless RIM 850 or RIM 857 Wireless Handheld Device are duplicated into your "Sent Mail" folder when using the IMAP protocol support

The eLink Agent service retrieves mail from POP mail accounts at predetermined intervals.

ELink Agent Protocol Support

ELink Agent wirelessly extends an end user's email based on the protocols the corporation permits on its email post office. The Agent Gateway supports both POP and IMAP protocols as the method of retrieving the user's email for delivery to the RIM 850 or 857. Protocol selection is completed at the time of ordering the device; however, the protocol may later be changed by the end user or authorized administrator via the eLink Agent web site.

ELink offers the following advantages:

1. Ability to support a wide range of email post office servers including Exchange, Notes Mail, Eudora and GroupWise as well as any of the hundreds of post office server software packages.
2. Minimize the dependence of the eLink Agent Gateway to a specific version of post office server software. For example, when Microsoft releases the next version of Microsoft Exchange, the need to update the eLink Agent Gateway software should be non-existent as long as Microsoft continues to support either POP or IMAP protocols. Products designed to be compatible with specific email post office server software packages are more likely to become obsolete with each new release of the server software, as well require version upgrades.

ELink Agent Enterprise Pricing:

Elink Agent Enterprise Server (4,000-5,000 users)	\$3,995.00
Elink Agent Enterprise Software Maintenance (annual rate)	\$1,000.00

BLACKBERRY ENTERPRISE DESCRIPTION AND PRICING

BlackBerry Enterprise Edition is the leading wireless email solution for the enterprise and is designed specifically for corporate environments using Microsoft® Exchange or Lotus® Domino™.

BlackBerry Enterprise Edition seamlessly enables wireless email while satisfying the needs of both mobile users and IT departments. Users get effortless access to email while on the road and IT departments get centralized administration in a secure solution.

The true power of BlackBerry is mailbox integration. BlackBerry integrates seamlessly with a user's existing corporate email account providing a wireless extension of their regular email mailbox. Users can read, compose, forward, reply, delete or file messages from the palm of their hand while maintaining their single, existing email address and mailbox. They can also control which messages they receive on their wireless handheld by setting email filters that monitor key words and message fields.

BlackBerry Enterprise Edition incorporates advanced Triple DES encryption technology to meet stringent corporate security guidelines for remote email access. Email messages remain encrypted at all points between

the BlackBerry wireless handheld and the corporate email account, ensuring the integrity and security of the data.

BlackBerry uses RIM 850 and 857 wireless devices.

Blackberry Enterprise Server (w/20 CALs; 500 devices maximum per server)	\$2,999.00
Blackberry CALs (10 pack)	\$490.00
Blackberry Server Maintenance (annual rate; includes 20 CALs)	450.00
Blackberry CAL Maintenance (annual rate; 10 pack)	\$75.00
Blackberry Device Airtime (monthly rate, unlimited usage)	\$39.95

MOTOROLA V-CLIENT DESCRIPTION AND PRICING

Motorola Messaging Server (MMS) is an enterprise-wide solution. It brings together wireless devices, corporate data systems, and the Internet. It allows you to deliver secure information to any user at any location, wirelessly.

Included with MMS is V-Client which is the encryption software installed on the wireless device. V-Client allows the subscriber to set the rules for what messages get delivered and when the delivery takes place. Using V-Client and MMS, subscribers can respond to email directly from their wireless device while making it appear to be sent from their mail account at the corporate office. There is no need for multiple email accounts.

Encryption between MMS and devices such as the PageWriter 2000X and Timeport P935 is a shared key with end-to-end encryption. With this method, a message is encrypted using a shared key that is entered at both ends of communication – pager and MMS. The message is sent to the carrier using either TMEX or WCTP and then transmitted to the pager. The carrier cannot decrypt the message because the carrier does not have the shared encryption key.

In addition to the shared key, a 40-bit random number is also used to encrypt the message. This 40-bit number is sent, unencrypted, with the message. Thus, even if the message is sent twice, the transmitted data is different.

The only unencrypted data that is sent to the pager is the 40-bit random number and the ID of the application that is sending the message. This way, each application can have its own unique shared key.

The WCTP protocol supports both alpha and binary mode transmission. Using the binary mode, MMS supports end-to-end encryption. The corporation firewall must be configured to allow MMS to initiate socket communications with the carrier network. All communications is initiated by MMS; therefore, the firewall configuration does not need to support unsolicited inbound socket connections.

Motorola MMS and V-Client Pricing:

Motorola Messaging Server (w/25 seats)	\$2,500.00
MMS Seats (25 seat package)	\$2,500.00
MMS Maintenance Agreement (annual rate per seat)	\$27.00
MMS Upgrades (per seat, if no Maintenance Agreement)	\$60.00
V-Client Monthly Airtime Rate	See Nationwide 2-Way Rates

DIRECT CONNECT

Direct Connect allows the customer to connect their PC or network directly with the Metrocall Paging Terminal via a dedicated phone line. Direct Connect also has a dial-up back-up line in the event that the primary line fails.

The benefits to the customer are:

- Much faster message transmission.
- Much more dependable paging dispatch.

Integrated Resource Management Systems come with Direct Connect.

Customer will provide at customer's expense:

- 4-wire analog leased line from their facility to Metrocall's paging terminal.
- Dial up back-up line.

- Two 4- wire leased line modems.

DIRECT CONNECT PRICING:

Product	Standard Price	Discount	State Rate
Access Fee	\$150.00/month	0%	\$150.00/month
4 wire leased line modems	\$400.00 each	0%	\$400.00 each

Direct Connect requires a 12-month agreement.
